

# Method Information Index (MII) Brief: Timor-Leste

The MII serves as a proxy for quality of counseling and reflects the extent to which women are informed about side effects and alternate methods. It is a summary measure constructed from three questions asked of current contraceptive users about the occasion when they obtained their current method: whether they were told about side effects, what to do about side effects, and whether they were told about other methods.

## MII by Region

Overall MII: 47%

Lower MII
